# About Our Company

**TRJ Engineering was  
established in 1974**

We have grown from a small engineering workshop in Keysborough to a team of over 35 engineering specialists, tradespeople and managers.

All of our fabrication and manufacturing takes place in-house at our 4000 m<sup>2</sup> workshop in Hallam.

We provide solutions for a broad range of manufacturing

situations, and thus utilise a variety of materials and fabrication procedures.

Our breadth enables TRJ to tackle jobs which other manufacturers are unable to. We take the same level of pride in each project - whether \$500 or \$5,000,000 in value. Accordingly, we promise the same quality and care to all clients, regardless of project size or complexity.

## Clients and Applications

TRJ Engineering has been providing a one-stop-shop for steel fabrication and engineering services to private and government clients across Australia for 45 years. We are now preferred fabricators to blue chip clients in both the private and public sectors, as evidenced by our loyal and continually expanding client base. Our dedication is to provide excellent service and state-of-the-art solutions for a broad scope of applications, such as:

- Earthmoving Protection & Safety
- Truck Chassis Manufacturing
- Street Furniture
- Retail Shop Fittings
- Stainless Steel Components
- General Engineering

# Proudly providing Australia with diverse and innovative solutions

## Street Furniture

TRJ Engineering Group has been manufacturing stock and bespoke street furniture for over two decades. During this time, we have completed projects for major councils, commercial developers, landscape construction companies and civil works contractors across Australia.

We thrive on the challenge to create new and exciting furniture to suit Australia's diverse streetscapes. Whenever we embark on a new project, we put the customer's interests and end goal first. Specifically, we need to fabricate low maintenance, long lasting products which exist in harmony with the existing surroundings. We offer 3D rendered imaging,

production CAD drawings and also create prototypes for all types of street and park furniture. As part of our turnkey service, site measurement, delivery and installation are available across metropolitan Melbourne.

Strength, detailing and quality of finish are vital in the production of components for public areas. Accordingly, TRJ Engineering will manufacture outdoor furniture in the most appropriate material for the specific item. Generally, these materials include mild steel (powder coated or galvanised), grade 304 and 316 stainless steel, aluminium and recycled timbers. However, we often work with many other metals and composites, and

encourage innovation!

We pride ourselves on diversity, inclusion and longstanding collaboration with the community. Thus, we provide turnkey solutions for city designers, landscape architects, maintenance, works and project managers. If you send us the drawings, we will look after the rest: from manufacturing, to supply and install of the highest quality furniture.

We love to bring clients' ideas to life and help see projects to fruition – our promise is to deliver on time and on budget, every time.
